MAJOR : Online Car Rental System
Car Rental system will allow you to accept online reservations and manage your entire fleet of cars, all from one single control panel .The system is using PHP and MySQL. By offering highly customizable online car rental booking system and software, your customers will be able to get exact quotes, see vehicle availability , and make online reservations from your website for self driving or rent it with a driver , with just a few clicks.
The system is very straight forward. After you log in as admin, you can create a brand and add vehicles used for booking online. The system also has testimonials and a contact us page so the customer can give their feedback and contact the site owner. The customer can register on the website and select which vehicle they'd like to rent. The project's website has a pleasant user interface and it's user-friendly.
